## **Halstab Announces New Line of Calcium Zinc Mixed Metal Stabilizers**

### **WEB RELEASE**

Contact: Ben Labovitz  
219-972-6130

Immediate Release  
November 3, 2008

Halstab announces the introduction of a new line of Calcium Zinc mixed metal stabilizers that meet the most demanding process requirements including calendaring and extrusion for all flexible and semi rigid vinyl both filled and unfilled. These new stabilizers are formulated around the patented intermediate PlastiStab 2266 which is an FDA approved over-based calcium oleate. The PlastiStab™ 3000 series of products will deliver outstanding color hold, long term stability, low plate out, clarity and can be customized to meet your process conditions and end use applications. These new stabilizer systems can be formulated with extremely low levels of VOC and phenol. A paper was presented in October at the Vinyl RETEC in Chicago demonstrating the performance of the PlastiStab 3000 series of products.

For more information on PlastiStab™ 3000 or a copy of the presentation please contact Ben Labovitz, Product Development Manager @ 219-972-6130 or e-mail him at [blabovitz@halstab.com](mailto:blabovitz@halstab.com).
