## **WEB RELEASE**

As the world becomes more green and environmentally concerned, a greater demand for liquid calcium zinc stabilizer systems is developing. The Halstab Div of Hammond Group, Inc is uniquely positioned to meet the ever increasing requirements for environmentally friendly stabilizer systems. With patented calcium intermediate technology, the PlastiStab line of stabilizers now includes liquid calcium zinc stabilizers that meet the most demanding process conditions for both calendared and extruded vinyl film. These stabilizers have been developed to meet the latest and most stringent environmental concerns. They are available both nonyl phenol free, BPA free, and are largely based on sustainable technology.

If you are interested in evaluating this technology, please contact Ben Labovitz in the Halstab Developmental Laboratories @ 219-972-6130 or email him at [blabovitz@halstab.com](mailto:blabovitz@halstab.com).
