Halstab Announces Full Line of Calcium Zinc Powder Stabilizers

WEB RELEASE

Contact: Ben Labovitz
219-972-6130

Immediate Release
January 23, 2008

In response to the market requirement for non lead additives, Halstab offers a full line of calcium zinc powder stabilizers for wire and cable applications. This line of stabilizers meets the performance criteria for all UL specifications from jacketing to the most demanding THWN-2. They are offered as non lubricating stabilizers to mirror the processing characteristics of lead or as a lubricating stabilizer for ease of formulation.

The calcium zinc stabilizers can be custom formulated around specific compounds to meet any UL specification. Halstab's ability to formulate, produce and meet customer service requirements is second to none in the market. All calcium zinc stabilizers are produced and inventoried at the Halstab plant located in Hammond, Indiana. A partial listing of the products available includes:

Product	Application
PlastiStab 2180	Wet Rated Primary Insulation THWN-2
PS 2175	105 °C Insulation and Jacketing
PlastiStab 2165	Jacketing and Automotive Insulation
PlastiStab BL822	Jacketing up to 90° C
PlastiStab BL786	Thin Wall Automotive Insulation
PlastiStab BL799	Thin Wall Automotive Insulation- EU Spec.

If these products do not address your current needs, please contact Ben Labovitz, Director of Product Development, at 219-972-6130 or e-mail your request to blabovitz@halstab.com.
